

INTRODUCTION TO NEURAL NETWORKS

Presented by the Mac AI Team!

LEVELS OF UNDERSTANDING

LEVELS OF ABSTRACTION

**“WOW, A
PREDICTION
MACHINE!”**

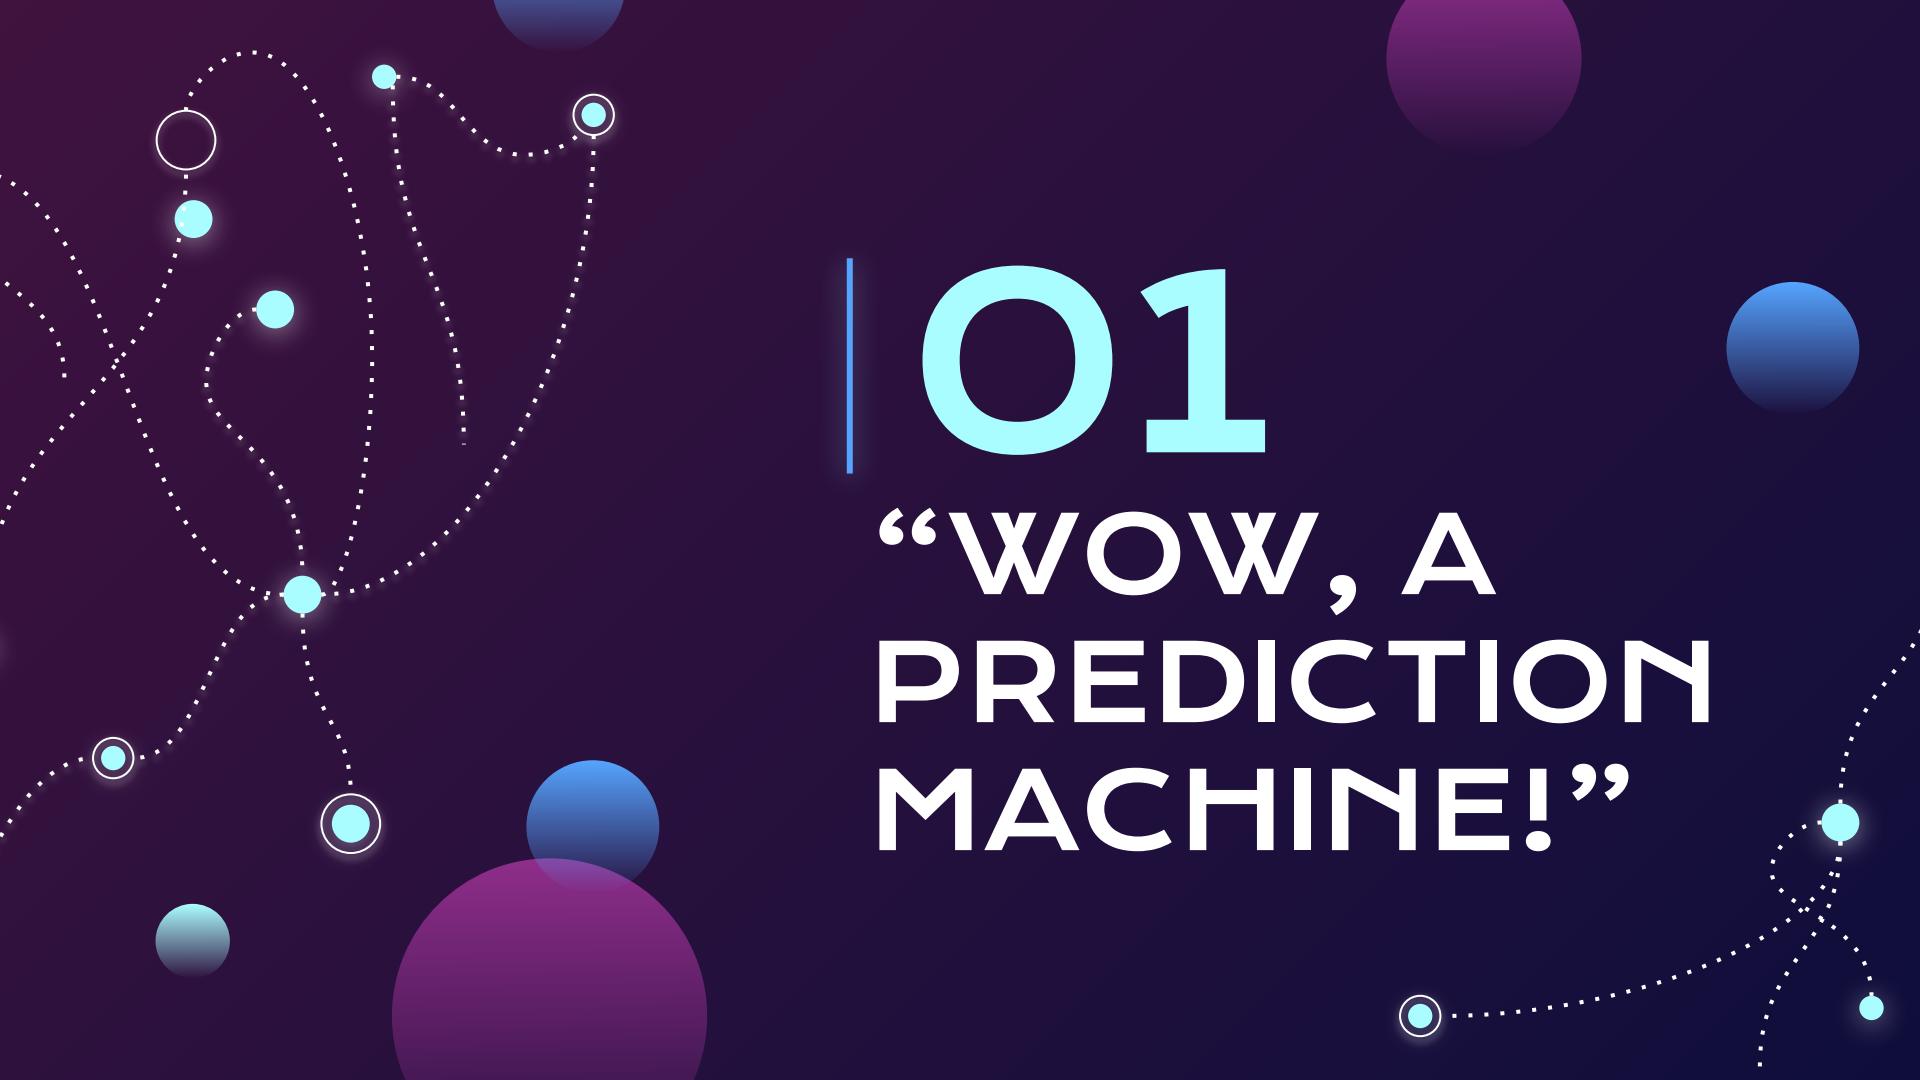

Input Health Data,
Receive Prediction!

**“WOAH,
IT’S A BRAIN?”**

From Raw Data to Refine
Insight, Layer by Layer.

**“OH...
IT’S MATH.”**

Breaking Down to
Weights and Biases.

01

“WOW, A PREDICTION MACHINE!”

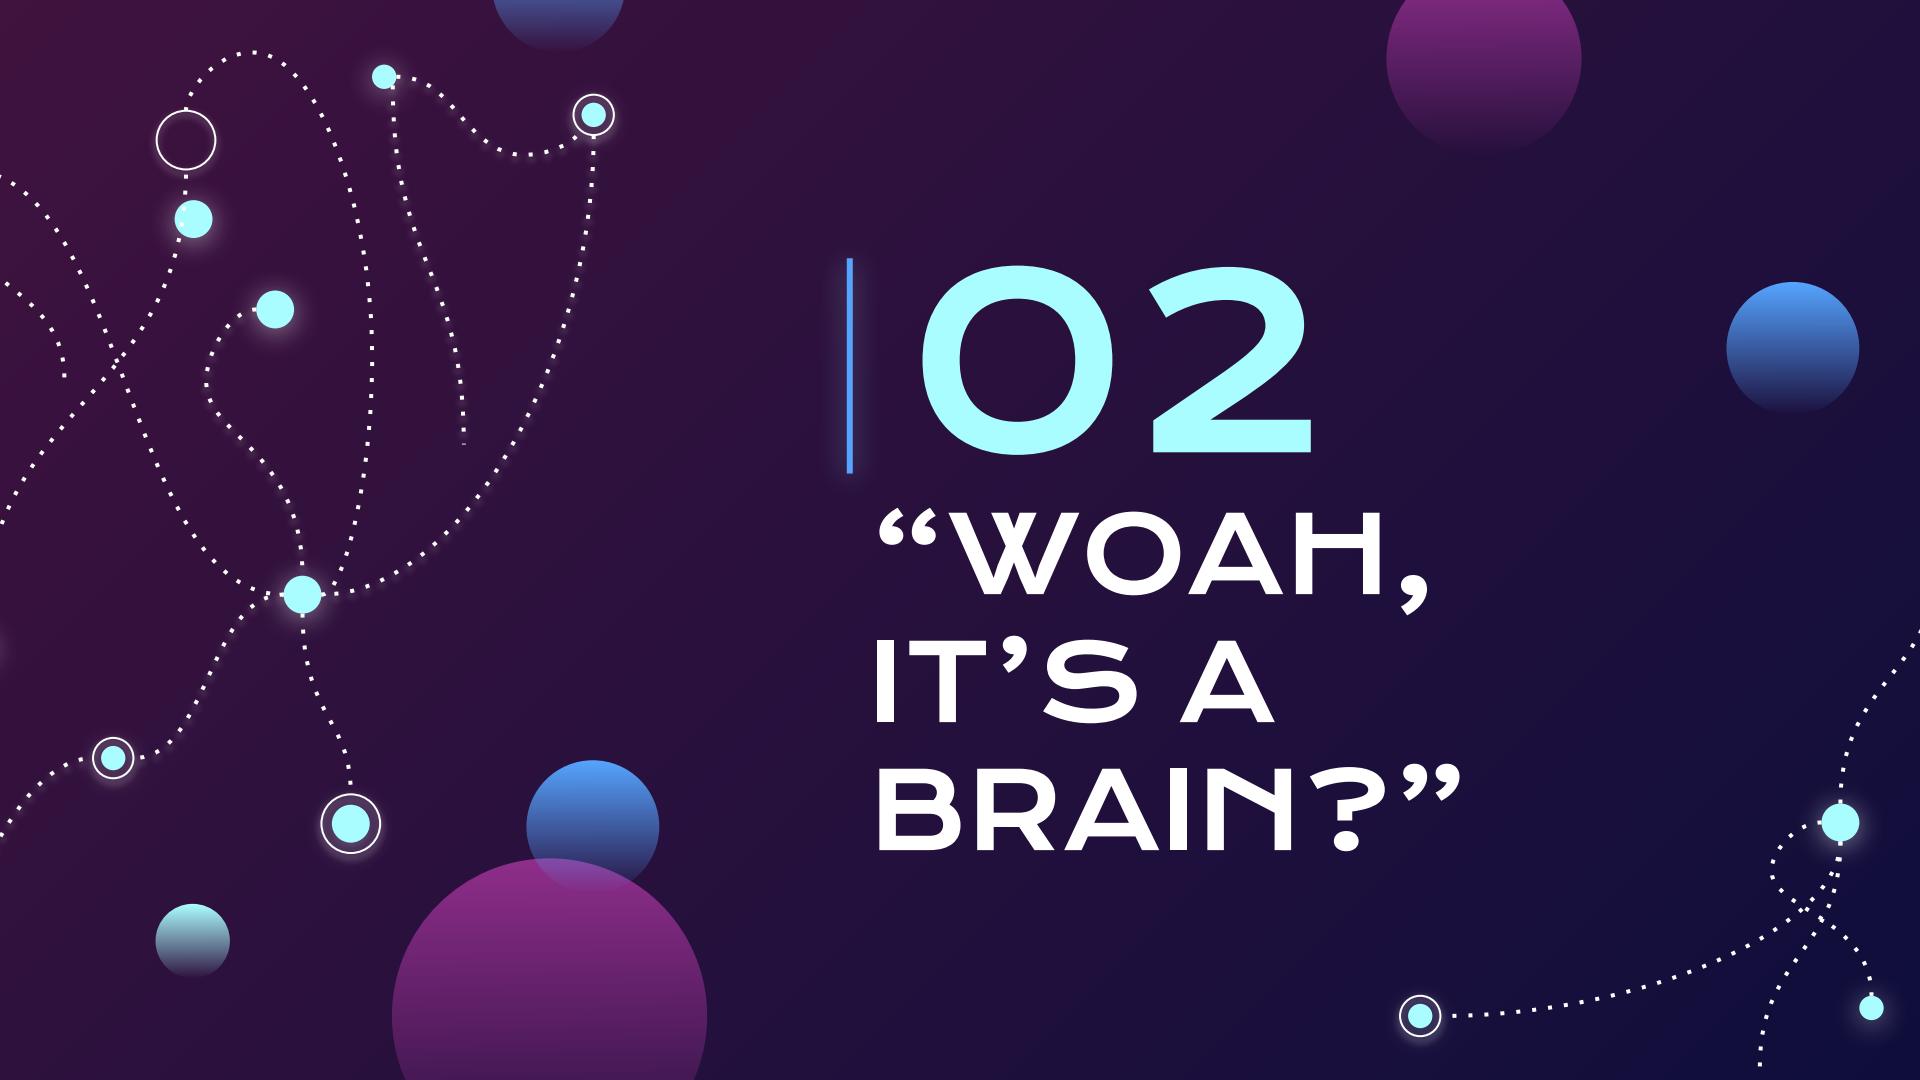

radius1	17.99

...	

**Very Cool
Prediction
Machine**

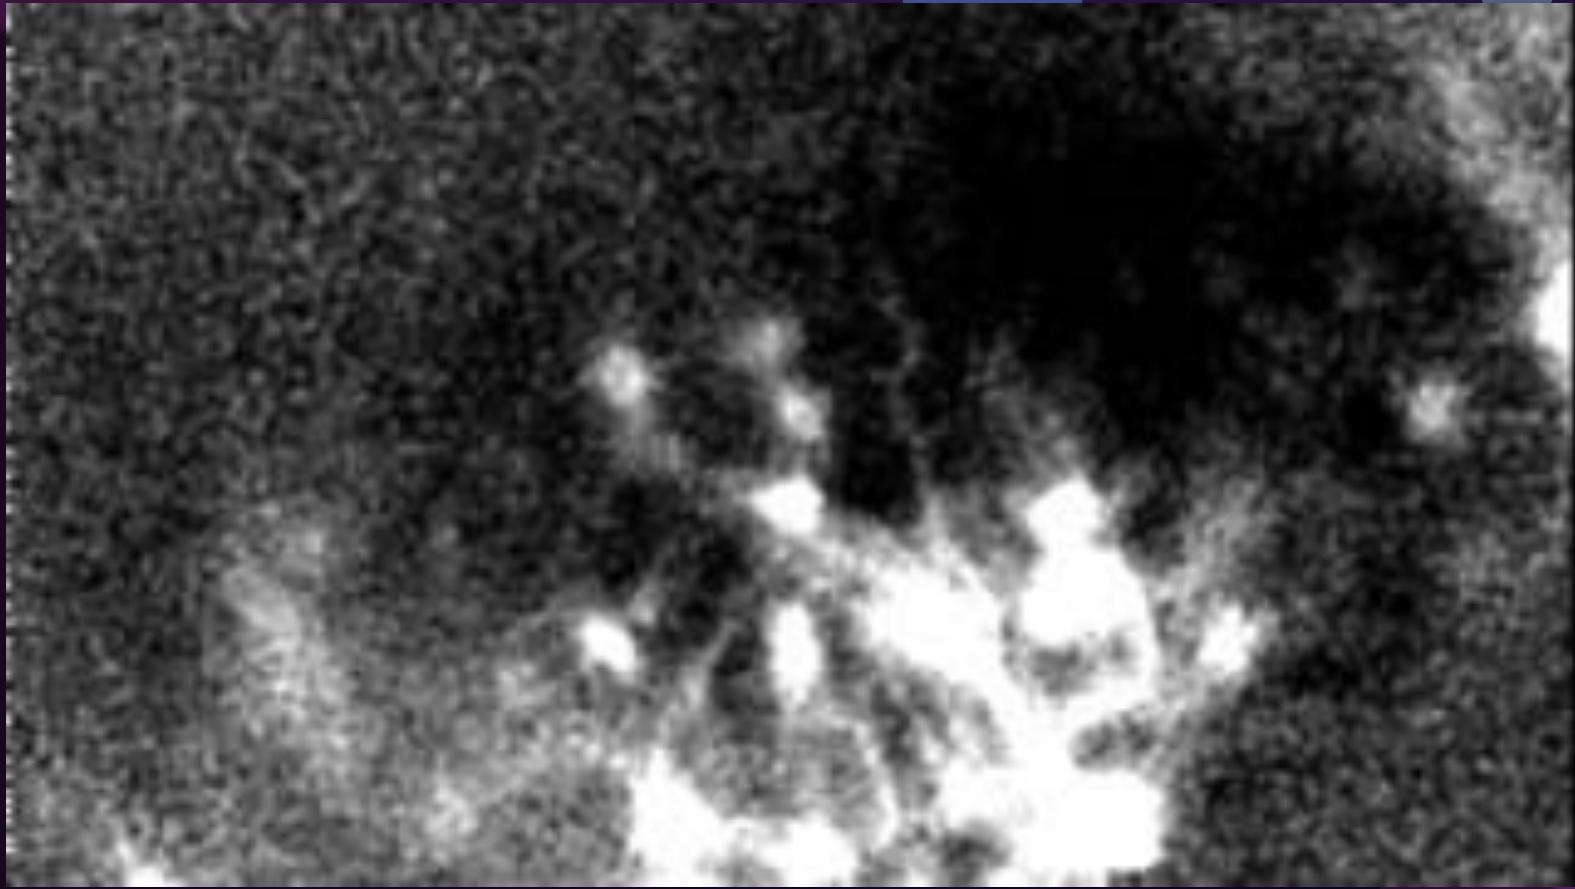

Likelihood Tumor is
Malignant

43%

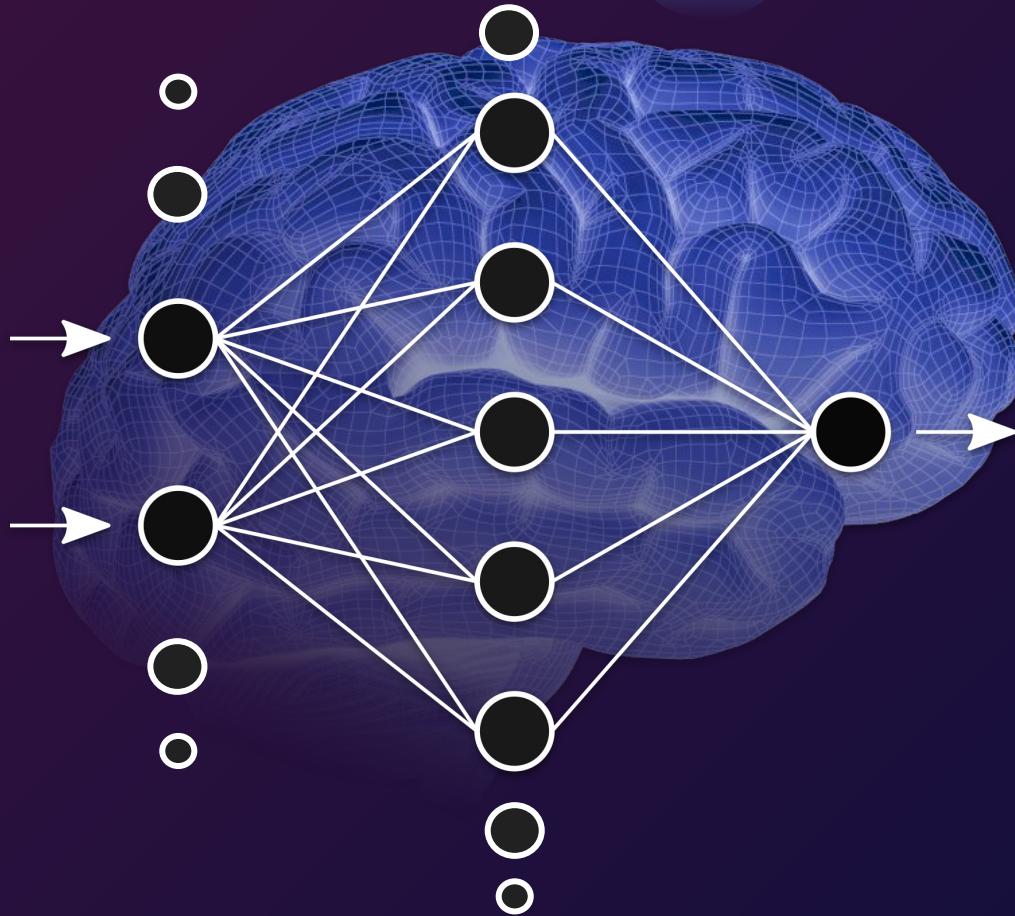

The background is a dark purple gradient. It features several glowing, semi-transparent spheres in shades of cyan, blue, and magenta. Dotted lines connect these spheres in a network-like pattern, creating a sense of motion and connectivity.

Okay, but how do we come up with the weights and biases?

We don't! The machine "learns".

BASIC TRAINING PROCESS

STEP 1

Initialize the weights and biases

STEP 2

Test it on a bunch of training data!

STEP 3

Calculate the score (the difference)

STEP 6

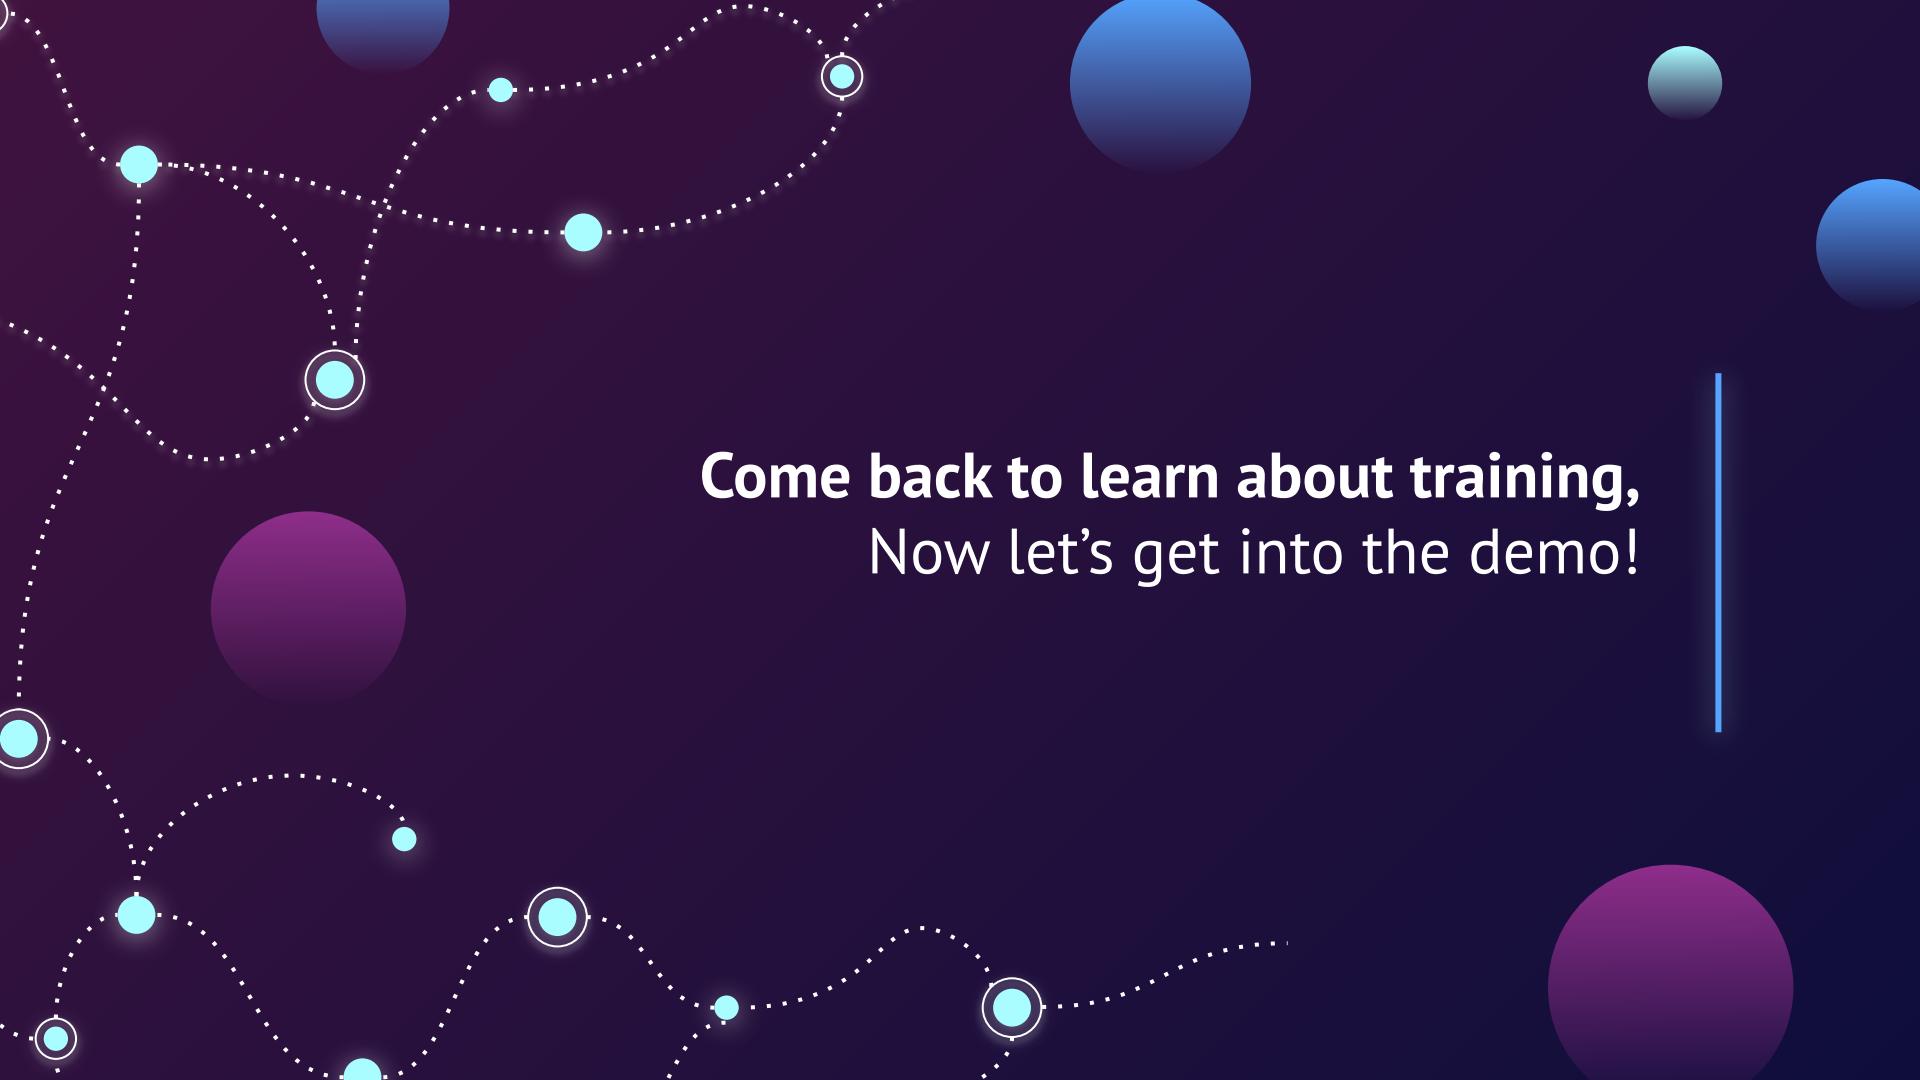

REPEAT!

STEP 5

Updates the weights and biases towards a better score

STEP 4

Calculate the differences for each weight and bias

**Come back to learn about training,
Now let's get into the demo!**
